

HEPATITIS B

About This Test

A Hepatitis B core IgM antibody test is a test for detection of a current or very recent infection of Hepatitis B (HBV). HBV is an infection of the liver caused by the Hepatitis B virus. HBV is spread through contact with blood or other body fluids from an infected person. Exposure can occur through unprotected sexual intercourse or sharing needles.

What Should I Do With My Results?

A negative test means that there is no indication of a current infection or it is too soon after exposure for HBV core IgM antibodies to be developed and detectable.

A positive HBV core IgM antibody test indicates an acute infection, usually with symptoms. It is recommended to follow up with a physician for treatment and management.

How Do I Obtain My Results?

Results are available through our online patient portal, My Labs NowSM. Visit www.compunetlab.com to sign in or setup an account. Or text MYLABS to 66349. Follow The signup link in the text message you receive.

Please be sure your name exactly matches the name on your lab test order. Contact help@luminarehealth.com if you need assistance. CompuNet is unable to provide verbal results to patients.

I Do Not Have a Regular Doctor. Where Can I Find One?

If you do not have a doctor, we recommend the following resources to locate one:

Premier Health Find a Doctor

(937) 684-4155 or 1-855-PREMIER

www.premierhealth.com/findadoc

WebMD Care

CompuNet DIRECT is direct access, preventative testing intended for education purposes. A CompuNet DIRECT lab test result is not a medical diagnosis and is not intended as a form of medical advice. Only a physician can interpret lab test results and diagnose a medical condition or disease.

Because tests have not been ordered by a physician, third-party entities, including Medicare and Medicaid, will not reimburse for these tests.
