

PREGNANCY TEST (HCG)

About This Test

hCG is a hormone that is measured in blood or urine to confirm a pregnancy. When you suspect that you are pregnant, this blood-based test can be done reliably 10 days after a missed menstrual period.

Human chorionic gonadotropin (hCG) is a hormone that is produced by the placenta of a pregnant woman. The level of hCG increases in the blood and is eliminated in the urine early in pregnancy.

What Should I Do With My Results?

It is always recommended that you meet with a doctor to determine what your laboratory test results mean to you. Your doctor will review all of your test results and, combined with your health history, will be able to provide an accurate picture of your health status.

A negative result of <5 indicates that hCG is not present in the blood and likely indicative of not being pregnant. However, a test performed too early in a pregnancy may give false-negative results.

A positive result ≥ 5 indicates that hCG is present in the blood and likely indicative of pregnancy. However, false-positive tests can occur in post-menopausal women or if the woman is taking hormone supplements.

How Do I Obtain My Results?

Results are available through our online patient portal, My Labs NowSM. Visit www.compunetlab.com to sign in or setup an account. Or text MYLABS to 66349. Follow The signup link in the text message you receive. Please be sure your name exactly matches the name on your lab test order. Contact help@luminatehealth.com if you need assistance. CompuNet is unable to provide verbal results to patients.

I Do Not Have a Regular Doctor. Where Can I Find One?

If you do not have a doctor, we recommend the following resources to locate one:

Premier Health Find a Doctor
(937) 684-4155 or 1-855-PREMIER
www.premierhealth.com/findadoc

WebMD Care
www.doctor.webmd.com

CompuNet DIRECT is direct access, preventative testing intended for education purposes. A CompuNet DIRECT lab test result is not a medical diagnosis and is not intended as a form of medical advice. Only a physician can interpret lab test results and diagnose a medical condition or disease.

Because tests have not been ordered by a physician, third-party entities, including Medicare and Medicaid, will not reimburse for these tests.
