

SYPHILIS

About This Test

A Syphilis test is a test used to detect a sexually transmitted infection caused by a bacterium *Treponema pallidum*. The test uses antibody detection to screen and confirm infection.

This infection is most often spread by sexual contacts, such as direct contact with a syphilis sore. Syphilis is treatable with antibiotics but can cause serious health issues if left untreated.

What Should I Do With My Results?

A negative test means that there is no indication or evidence of infection at the time of the test. Antibodies may not be detected for several weeks after exposure to the bacteria.

A positive screening test is followed by a confirmation. A positive result on the confirmation indicates a syphilis infection. It is recommended to follow up with a healthcare provider for treatment. If you are infected, your partner should be tested and treated as well.

How Do I Obtain My Results?

Results are available through our online patient portal, My Labs NowSM. Visit www.compunetlab.com to sign in or setup an account. Or text MYLABS to 66349. Follow The signup link in the text message you receive.

Please be sure your name exactly matches the name on your lab test order. Contact help@luminatehealth.com if you need assistance. CompuNet is unable to provide verbal results to patients.

I Do Not Have a Regular Doctor. Where Can I Find One?

If you do not have a doctor, we recommend the following resources to locate one:

Premier Health Find a Doctor

(937) 684-4155 or 1-855-PREMIER
www.premierhealth.com/findadoc

WebMD Care

www.doctor.webmd.com

CompuNet DIRECT is direct access, preventative testing intended for education purposes. A CompuNet DIRECT lab test result is not a medical diagnosis and is not intended as a form of medical advice. Only a physician can interpret lab test results and diagnose a medical condition or disease.

Because tests have not been ordered by a physician, third-party entities, including Medicare and Medicaid, will not reimburse for these tests.
